

ENVIRONMENTAL POLICY

ENVIRONMENTAL POLICY

Avesoro is committed to minimizing its impact on the environment and, where feasible, will protect and enhance the quality of the environment in all areas where it explores and operates. We will strive to achieve environmental excellence consistent with the principles of sustainable development.

We will regularly review and ensure this policy remains relevant to each stage of our operations and to the needs of our stakeholders.

In order to achieve these objectives, we will:

- Ensure that environmental issues are considered in company's business strategy and its decision-making process.
- Comply with and, where appropriate, exceed the requirements of laws, legislation, regulations and other policies, codes, and standards.
- Ensure that environmental management is one of the company priorities and that environmental policies, programs, and practices are essential elements of our exploration and operational activities.
- Ensure that environmental footprint is minimized with developing opportunities for recycling and effective use of resources.
- Progressively develop and continually improve, implement, and maintain environmental management systems that are consistent with internationally recognized standards and ensure pollution prevention.
- Identify short-, medium- and long-term environmental targets and regularly monitor, audit, and review our environmental performance based on the each of the targets with involvement of 3rd party.
- Provide adequate resources, staff, and requisite training and promote environmental awareness so that all employees and contractors are able to fulfil their environmental responsibilities.
- Prepare risk based environmental management system, review and take account of the environmental aspects of each activity, for the mine lifecycle including exploration, development, operation, and decommissioning and closure of any facility, and prepare action plans to minimize environmental impacts.
- Ensure that company is prepared emergency response and preparedness plan for emergency situations in coordination with company's stakeholders.
- Promote our environmental performance through liaison with and public reporting to the Government and Community
- Assess the climate change risks and then develop a climate change strategy that identifies the risks and opportunities for the Company and sets targets for GHG emission, and energy reduction.
- Assess the water cycle of the operation and follow the new efficient water utilization technologies to minimize the impact to the water footprint.
- Use land only required for the project and operation in responsible manner to minimize impact to the habitat.
- Preserve integrity of flora and fauna which the Company explore and operate.
- Develop, review, and update the Closure and Rehabilitation plans for the Company's mine including the social considerations to provide the sustainable and stable land use to the Communities and Government
- Ensure wastes are sorted out at the source to minimise the impacts to the environment and host communities.
- Ensure Tailings Storage Facilities (TSFs) are designed, constructed, operated, and rehabilitated with best practices and international standards and guidelines.
